

Year end newsletter & outlook into 2023
Thank you to all customers and partners

BODO Int. GmbH & Co. KG
Segeberger Landstr. 53-55
24619 Bornhöved
GERMANY

Prospering new partnerships was the theme for 2022 at BODO Int. GmbH & Co. KG. We are particularly pleased that we came to represent *TECWILL*, the Finnish technology leader in the segment of high-quality mobile and stationary concrete mixing plants and plant controls, in the German-speaking market. The addition of *TECWILL* to the portfolio was the logical consequence of the intensive years in the concrete sector as a service and sales partner of *GOMACO*, world leader in the field of concrete technology.

Both manufacturers were present at *bauma 2022*, the world's most important meeting point for the construction machinery, building material machine and mining machine industry. Here are a few impressions of the impressive *GOMACO* and *TECWILL* stands:

Tecwill presented a fully functional concrete batch plant. The trade fair visitors were enthusiastic about the details of the system and were able to get an accurate picture of its functionality. An advantage of the modular container design: This system can be set up and dismantled again and again at different locations in the shortest possible time. Accordingly, the *ARCAMIX 3.0* could be put into operation in Norway immediately after the trade fair. A Tecwill customer is always extremely flexible and can choose from a range of options. Tecwill not only sells complete systems, but also individual

assemblies. Of course, integration into existing systems is also possible. At the same time, Tecwill remains very user-friendly. Above all, visitors and customers praised the ease of maintenance, the quick installation and mobility as well as the quality of the installation work. This interplay of factors ensures optimized system capacity. Unsurprisingly for the Norwegian market, the *ARCAMIX 3.0* was configured fully insulated and designed for 6 different aggregates and 10 additives according to customer requirements. The technical aspects of the "flying" weighing system developed by Tecwill and the *OptiMoist* moisture measuring system were met with great

interest at bauma. The interaction of the weighing system, binder scales and optical probe ensures a consistently high concrete quality and consistency and significantly saves binder (up to 30kg /m³). Anyone at bauma who was looking for even more mobility could contact the Tecwill employees or our BODO exhibition team for more information about the COBRA concrete mixing plant. The COBRA plant requires even less transports and comes with a shorter assembly time on the construction site.

In addition to well-established technology, **GOMACO** exhibited a new electrically powered version of the CC 1200 with a dual GNSS control system. The Curb Cadet manufactures concrete curbs using the slipform process. Additionally, the GT3300 and the three-legged Commander III were exhibited. On customer request, GOMACO also offers:

- the possibility of compacting using electric vibrators,
- a cross smoother,
- a dowel setter adapted for the European market,
- solutions for two-layer concrete paving in motorway construction.

Please just let us know about specific requirements and wishes and we are happy to offer you an innovative solution!

Also, this past year, our **used sales business** went very well despite the corona- and war-weakened economy. We were able to sell machines from Germany to a number of new customers worldwide. If you are looking to sell, just contact us, we are happy to help.

Among other things we exported Volvo excavators to Egypt, a long-reach Hyundai excavator to Romania, and a GOMACO paver to Aşgabat, Turkmenistan, where it currently paves the runways for the new airport.

For 2023, we already have great machines waiting for their final overhaul so that they can then be sold with guarantee and warranty, such as the KOMATSU PC1250-7 which can be found [here](https://www.machineseeke.com/Haendler/48712/BODO-Int-GmbH-Co-KG-Bornhoeved) among other offers. If you are looking for used equipment in good shape, check out our portfolio here: <https://www.machineseeke.com/Haendler/48712/BODO-Int-GmbH-Co-KG-Bornhoeved>

With all of this in mind, we would like to thank all customers and business partners who made this past year so successful for us! At the same time, we are more than excited to see many of you again next year!

We wish you a Merry Christmas and a healthy New Year!
